## **SDA Update for WBU-ISOG**

Stewart Sanders

30<sup>th</sup> May, 2012

The data included in this briefing includes information proprietary to the Space Data Association Limited and/or Analytical Graphics, Inc. and shall not be duplicated, used, or disclosed in whole or in part for any purpose other than to evaluate the information. This restriction does not limit the recipient's right to use information contained in such data if it is obtained from another source without restrictions. The data subject to the restriction is contained in sheets marked with the following legend: Use or disclosure of data contained on this page is subject to the restriction on the title page of this document.

# What is the Space Data Association?

- The Space Data Association (SDA) is a not-for-profit association formed by and for satellite operators to provide reliable and efficient data-sharing critical to the safety and integrity of the space environment and the RF spectrum.
- The SDA was founded by **Inmarsat**, **Intelsat** and **SES** — three of the leading global satellite communications companies. These three companies, plus **Eutelsat**, now form the Executive Board of the SDA. The Standard Members are represented by **Paradigm**.

# SDA Charter

- Seek and facilitate improvements in the safety and integrity of satellite operations through wider and improved coordination between satellite operators
  
- Seek and facilitate improved management of the shared resources of the Space Environment and the RF Spectrum

# SDA: A BRIEF HISTORY

# Space Data Association

## A Brief History

- **SDA incorporated in the Isle of Man on 19<sup>th</sup> June, 2009**
  - Formed by Inmarsat, Intelsat and SES who become Executive Directors
  - Eutelsat joined as Executive Director, June 2011
  - Administrative services agreement with Mansat Ltd.
  - Issued RFP for the Space Data Center
  - Developed membership agreements
    - SDA Memorandum and Articles of Association
    - SDC Data Terms and Conditions
- **Issued RFP for the Space Data Center**
  - Signed SDC 'Service Provider Agreement' with AGI 11<sup>th</sup> April, 2010
- **Systems Development**
  - SDC Initial Operations Capability began July 2010
    - SOCRATES GEO and LEO users transferred from CelesTrak to the SDC
  - SDC Full Operations Capability achieved Sept 2011

# Space Data Association Membership

## ▪ Executive Directors

- Eutelsat (Mark Rawlins), Inmarsat (Ruy Pinto), Intelsat (Toby Nassif) and SES (Stewart Sanders)

## ▪ Standard Member Director

- Paradigm (Rick Greenwood)
- Additional Standard Member Director to be elected today at AGM

## ▪ Standard Members

- AMOS-Spacecom, Arabsat, Avanti, Echostar, GE, GeoEye, Optus, Paradigm, StarOne, SS/L, Telesat,

## ▪ IOC Participants Not Yet Members

- Eumetsat, Indovision, Canadian Space Agency, GISPDA, Digital Globe

## ▪ Including IOC participants

- 237 GEO satellites from 15 operators
- 110 LEO satellites from 7 operators
- Approx. 65% of GEO satellites processed in SDC through operator data

# Space Data Association System and Process Support

## ■ SDA Technical Advisers

- SDC Oversight (Paul Welsh, AGI)
- SDC Operations Manager (T.S. Kelso, Ph.D, AGI/CSSI)
- SDC Program Manager (Dan Oltrogge, AGI/CSSI)

## ■ SDA Ltd. Administration

- Corporate & Membership Administration Services (Ian Jarritt, Mansat, IoM)

## ■ Legal/Strategy/Government Policy

- Andrew D’Uva (SES), Rich Dalbello (Intelsat), JJ Shaw (Inmarsat), William Blunt (SES), Denise Olmsted (Intelsat), Paul Welsh (AGI)

## ■ Flight Dynamics

- Dean Hope (Inmarsat), Joe Chen (Intelsat), Pascal Wauthier (SES)

## ■ RF Interference

- Steve Smith (SES), Ron Busch (Intelsat)

**This list is not exhaustive and the SDA requires the active support of its member. Many of us are involved in multiple of these activities.**

# Space Data Association

## Some Statistics

### Statistics from the first 5.5 months of FOC operations

- **Oper. Ephemerides files uploaded by members: 39,109**
- **CA runs executed: 39,109**
- **Pairs of satellites processed for CA: 3,471,665,589**
- **Conjunctions detected (50 km threshold): 702,090**
  - Equates to approx. 2.6 million conjunctions for all GEO active satellites per year based on 50 km threshold
  - Growing confidence in predicts will allow smaller thresholds to be used > less conjunctions requiring action
- **TLE's in database: 7,840,346**
- **Satellites in database: 15,275 of which 152 are SDA members**

# Space Data Center

## FOC FAQ

- **What does the SDC currently provide?**
  - CA Processing for SDA Members, against SDA Member data, against some other non-Member contributed data and against TLEs; CA participation is compulsory for members. Other data sources are being pursued
  - Points of Contact data which is also compulsory for members
  
- **What does the SDC not currently provide?**
  - RFI data sharing. The framework for this is in place but the data contribution and retrieval is still being developed

# SDA KEY TECHNICAL POINTS

# Space Data Association

## Key Message Points for Members

- **The SDA/SDC is the only CA process that uses operator data including manoeuvre planning predicts**
  - Conjunction Summary Messages (CSMs) issued for active sat.'s are not accurate
- **JSpOC process for CSMs does not use owner data**
  - JSpOC does not view the data as authoritative but not using it is why most CSMs issued are not accurate and why the vast majority of true conjunctions go unwarned.
- **JSpOC confirmed that CSMs are intended merely as a “heads-up” warning and are not actionable/reliable**
- **AGI/CSSI analysis show that TLEs alone aren't sufficiently accurate or reliable to be used for CA processing or for geolocation measurements**
  - In addition to mis-tagging issues, the data degrades by 25~35 km for daylight hours, most likely due reliance on night-time optical tracking systems
- **TLEs from [spacetrack.org](http://spacetrack.org) are regularly a week behind operator data in reflecting maneuvers**

# Space Data Association

## Key Message Points for Members

- **Radar and optical networks face challenges and scheduling constraints that satellite operators do not have**
  - Limited observation resources, conflicting mission objectives and priorities, track mis-association problems, lack of sensor scheduling and sensor lighting constraints
- **AGI/CSSI analysis raises concerns about the ‘higher accuracy’ SP product**
  - JSpOC TLE products match more closely with SDA detailed positional predictions than do the JSpOC’s SP product, perhaps indicating procedural or implementation issues
- **JSpOC tools and systems are not set up to use operator data in their routine screening**
  - It is a manually intensive process and human resource constraints make it impractical. Investing in a new system presumably is years away and will likely cost many times the cost of the SDA’s SDC. For the JSpOC to duplicate the routine screening of active satellite data (including maneuver plans) currently performed by the SDC seems impractical in today’s budget-constrained environment.

# Space Data Association

## Key Message Points for Members

- **Intelsat studies have shown that the vast majority of Intelsat-on-Intelsat conjunctions were not warned by the JSpOC**
- **The Space Data Center (SDC) processing is fully automated, incorporating the very latest maneuver plans, frequent tracking observations and detailed satellite modeling.**
- **Satellite operators are the ONLY source of maneuver plans for their satellites, and the SDC is the only system routinely using it for conjunction screening**
- **There are opportunities for JSpOC and others to partner with SDA to complement the unique capabilities each brings, improving the quality of conjunction warnings for all.**

# **SDA LEGAL FRAMEWORK AND DATA PROTECTION**

# Participating in the SDA

- Meet the membership criteria & apply
- Obtain SDA approval
- Agree to **Space Data Centre Terms & Conditions**
- Comply with Isle of Man & business formalities  
(**Memorandum & Articles – Letter of Guarantee**)
- Provide operational Points of Contact data
- Complete SDC data acceptance and validation process for your satellite data
- Receive SDA services

# Legal Liability Objectives

- **SDA legal arrangements intended to:**
  1. **Encourage data contribution & use**
  2. **Protect data from deliberate misuse**
  3. **Allow contribution and use of data on “as is” basis**

# Data Use Control / Legal

- **How does SDA obtain & protect member data?**
  - Legal agreements between subscribers and SDA
    - Permitted Uses for SDC data/products
    - Prohibited Uses for SDC data/products
    - Retransmission to third parties prohibited
    - Obligations for member data contribution
    - Legal liability issues are addressed by enforceable contract
      - Isle of Man law allows the members to enforce the terms of the agreement directly against other members
  - Multiple technical / security controls within SDC

# Permitted & Prohibited Uses

## ■ SDC - Permitted Uses:

- Operational support, including Safety of Flight
- EMI/RFI resolution of actual harmful interference, including at ITU
- Support for insurance underwriting
- As legally required by national regulatory authorities

## ■ SDC - Prohibited Uses:

- Any commercial purposes (sales, planning, marketing, etc.)
- Securing orbital-spectrum rights
- Transmittal to 3rd parties (except for Safety of Flight)
- **Any other use that is not a Permitted Use**

# SDC Data Sources (As of 12 Mar 12)

Data and Source	Purpose
GP Two-Line Elements (space-track.org)	Conjunction Assessment (CA) for objects not in SDC (e.g., debris)
SDA Member Ephemerides and planned maneuvers (SDA Members) <i>Measured by operators (ranging, etc.)</i>	Populate SDC with current Member object information for CA and EMI/RFI support
SDA Member satellite and operations center / POC details	EMI/RFI resolution & Geolocation support Populate “phone book”

# Member Data Contributed

SDC Mission Area	Data Contributed by Member for Its Fleet	Other Member Direct Data Access?
CA & Maneuver Planning Safety of Flight	Measured Ephemerides Planned Maneuvers	Only for identified conjunctions  Analysis products provided
EMI/RFI Resolution  RFI Alerts Service	Satellite communications payload configuration Reference Emitters / Calibrators Satellite beam configuration & patterns Local Oscillator / Translation Frequencies Nominal Satellite Longitude Stationkeeping box size per satellite RFI event alerts	Some, but primarily analysis products provided
Operational Contact Information	Satellite bus and payload Control Center Information for each satellite	Yes

# **SDA/SDC OBJECTIVES & STRATEGY FOR 2012**

# Key Initiatives

- **Grow membership**
  - Goal is for 100% membership of all operators in all regimes
- **Develop Government and industry relationships**
  - Seek cooperation with US and other Governments
  - Data sharing and improve best practices for all parties
- **Secure access to additional data sources**
  - Improve accuracy of data, particularly for non-active objects and debris
- **Develop space insurance relationships**
  - Aim to secure preferred terms for SDA members since we are better managing risk
- **Implement data sharing for RFI mitigation**
- **Financial: Reduce Operating Costs, Improve Service, Revise Funding Model**

# Space Data Association

## Other Initiatives Under Consideration

### ■ **Space Weather repository**

- NOAA contacts have suggested that SDC could be used to distribute Space Weather data to users. In return, SDA members who participate in this service would provide NOAA with more detailed information on in-orbit experience of space weather, including anomalies so that NOAA could develop better models.

### ■ **Carrier ID repository**

- Once implemented, the Carrier ID users will need a reference database to correlate the unique Carrier IDs with actual contact points for the uplink; contact points will most likely be the relevant satellite operator who will themselves have details on the actual uplink operator.

### ■ **Enhanced Services**

- Beyond core CA and Points of Contact services which are compulsory, develop Enhanced Service offerings which would be voluntary.

# Contacts – For Presentation Follow Up

**SPACE DATA**  
ASSOCIATION

## SDA Directors

**Mr. Stewart Sanders**  
*Chairman and Director of the SDA*  
Senior Vice President  
SES Engineering  
[stewart.sanders@ses.com](mailto:stewart.sanders@ses.com)

**Mr. Tobias Nassif**  
*Director of the SDA*  
VP Operations  
Intelsat  
[tobias.nassif@intelsat.com](mailto:tobias.nassif@intelsat.com)

**Mr. Ruy Pinto**  
*Director of the SDA*  
VP Operations  
Inmarsat  
[ruy\\_pinto@inmarsat.com](mailto:ruy_pinto@inmarsat.com)

**Mr. Mark Rawlins**  
Head of Payload Engineering & Operations  
Eutelsat  
[mrawlins@eutelsat.fr](mailto:mrawlins@eutelsat.fr)

## SDC POCs

**Mr. Paul Welsh**  
*SDC Oversight*  
[pwelsh@agi.com](mailto:pwelsh@agi.com)  
610-981-8004

**Mr. Dan Oltrogge**  
*SDC Program Manager*  
[oltrogge@agi.com](mailto:oltrogge@agi.com)  
610-981-8616

**Dr. T.S. Kelso**  
*SDC Operations Manager*  
[tskelso@agi.com](mailto:tskelso@agi.com)  
610-981-8615
